

Session 1 in a NutShell

`cd` = change directory

`cd ..` = move up one level

`cd` = move back to home folder

`cd /path/to/folder` = move to folder

`ls` = list contents of a directory

`-l` = long form

`-a` = list all files (even those beginning with ".")

`-h` = makes file sizes human readable

`-s` = lists files by size

`mkdir` = create a directory

`rmdir` = remove an empty directory

`head` = prints first 10 lines of file

`-n` = to specify number of lines (e.g. `-n 5`)

`tail` = print last 10 lines of file

`-n` = to specify number of lines (e.g. `-n 5`)

`cp` = copies a file

`-r` = required for copying folder

`rm` = removes a file

`-r` = required for moving a folder

`wc` = prints the number of lines, words, and characters in a file

`-l` = for only lines

`-w` = for only words

`-m` = for only characters

`paste` = pastes two files side by side

`-d` = to specify delimiter (e.g. `-d ","`)

Short Cuts:

Control + a = move cursor to front of line

Control + e = move cursor to end of line

Control + c = kill current command

To exit less type q
